Cordsets

GlobTek manufactures power supply cords, alternatively known as power cords, line cords, mains cables, cord sets, or wire harnesses. GlobTek offers standard and custom cord sets which are detachable from both the power supply and the electrical equipment, and consist of a flexible cord with electrical connectors at either end, one male, and one female (such as IEC 60320 connectors). Alternatively, power cables may be either fixed or detachable from the appliance. The female connector attaches to the piece of equipment or appliance while the male plug connects to the electrical receptacle or outlet. GlobTek manufactures power cords in an infinite number of colors, lengths, and terminations.

GlobTek has introduced a new power cord & cordset selector guide, an easy-to-search interface with full specifications on our cordset products conforming to international power standards. You can quickly narrow down search criteria based on blade type, cable type, number of conductors, electrical standard, voltage or maximum current.
